= shared energy

Form unites with Function to create Synergy—a modular, award-winning furniture system so innovative the final results exceed the sum of its individual parts.

form - versatility

Synergy cabinets express the clean look found in contemporary European styles combined with made-in-America practicality, and the finest materials. The cabinets are available in cherry, maple, walnut and black. Hardwood doors and surfaces complement veneered side panels in matching woods or black, perforated steel. The sturdy corner posts are anodized aluminum. The snap-on hinges allow a full range of motion. Form, Function, Simplicity, Versatility. Synergy shares these values with customers who can select one of Synergy's solutions or configure their own cabinet to create the perfect system for their A/V needs.

core - function

The core of Synergy cabinetry is a patented, modular design that easily allows owners to configure cabinets to perfectly match their entertainment needs. Synergy cabinets are available in **Single, Twin, Triple** and **Quad** widths as well as different heights, including 10, 20, 30 and 40-inches. The modules can be used as is, with accessories, or combined with each other to precisely suit individual living spaces. They effortlessly carry the weight of flat-panel TVs and other components on hardwood bases tops sturdier than many desks. Strong aluminum posts support the shelves at the precise heights required, leaving ample ventilation space for heat-generating electronics. Synergy cores are adaptable and compatible with how our lives are lived.

customize - enclosures

Synergy options are abundant and diverse.
The more asked of Synergy, the more it delivers.

Full modularity enhances the cabinets' extraordinary flexibility. **Rear Panels** remove easily, shelves quickly adjust, cables are channeled out of sight. **Doors** employ solid wood framing around frosted glass, or a perforated center panel that masks speakers without compromising sound. Convenient **Locks** provide as-needed security. An optional **Media Drawer** keeps DVDs and CDs hidden but handy. **Extended Rear Panels**, made of louvered steel, add more depth and better ventilation. Everything about Synergy adapts to meet individual needs.

customize - footing

Synergy means style from the ground up. The cabinets' **Leveler Feet** provide strong, precise support, as do Synergy's optional black and silver **Saturn Casters**; tapered **Stiletto Feet**, also in black and aluminum; and shapely **Polished Aluminum Feet**.

customize - tv mounts

Salamander's mounting devices make it easy to integrate LCD or plasma flat-panel TVs with Synergy Twin, Triple or Quad width cabinets. The mounts have universal brackets, support up to 180 lbs., easily integrate with front-channel speakers, and let users adjust the height and angle of their screens. Securely fastened, the TV appears to float.

triple

customize - media storage

The **Synergy Media Cabinet** is ideal for DVDs and CDs. A standalone storage solution, its adjustable side panels feature easy-to-use support pins that let owners select optimal heights for the unit's five aluminum shelves, and rest them flat or at an angle for easy title scanning. An optional door keeps the collection out of sight.

A pull-out **Media Tray**, optional on Synergy Cabinets, keeps DVDs and CDs hidden but handy behind the cabinet's doors.

connectibility

Synergy Forms follow Function over time as well as in space, making them ideal for anyone expanding a cabinet as their Audio / Video needs change.

Handsome, functional **Hutches** add an upper tier to **Synergy Wall Systems**. A core module easily expands into a hutch by attaching a vertical extension of the same width. Threaded connectors solidly join the units, assuring visual and structural integrity and additional years of valuable use.

Synergy cabinets can expand horizontally as well as vertically. Special **Bridge** options span Synergy cabinets so they run along a wall as single, unified forms. Synergy Bridges accommodate just about any widescreen TV, and a second Bridge, above or below the screen, can accommodate a center-channel speaker.
